

Serial No. [[10/924,413]] 10/822,079Substitute Sheet**REMARKS**

The Examiner has rejected claims 1 through 4 under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out
5 and distinctly claim the subject matter which applicant regards as the invention. Applicant has adopted the Examiner's suggestions to overcome these informalities.

Furthermore, the Examiner has rejected claims 1 through 4 under 35
10 U.S.C. 102(b) as being anticipated by Leist et al. (US-5,555,923) and rejected claims 1 through 4 under 35 U.S.C. 103(a) as being unpatentable over Berger, Jr. (US-6,062,293), in further in view of Leist et al. (US-5,555,923).

First, one of the important differences that differentiates Leist from
15 the claimed invention is that the reinforcement is not continuous. Secondly, Leist does not show the use of folded joints. Lastly, the reinforcement is not placed inside the folded joints. These differences are sufficient to overcome the 102 basis for rejection.

20 The claimed improvement provides additional strength in the specific portions of the garage door that are more susceptible to wind forces, namely, the reversely folded edge portions with complementing joints. The other alternative, using roll forming techniques, would have been to use thicker panels. However, this would have increased the cost
25 and, more important, the weight. The characteristic of the claimed improvement providing for conforming portions of the reinforcement has the effect of selectively strengthening the most vulnerable portions with

Serial No. [[10/924,413]] 10/822,079Substitute Sheet

minimal increase in cost and weight. The effectiveness of the use of
conforming reinforcement was not obvious in Berger or Leist, or both in
combination. No motivation is encountered in the cited reference, or
elsewhere, to specifically buttress portions of a panel, especially the joints,
5 that extend uninterrupted.

Applicant's proposed amendments obviate the Examiner's objections and believe his application is now allowable and ready to be passed to publication and requests an early favorable action.
